

OUR VISION OF UNDERGRADUATE STUDY

Students entering NYU and the Steinhardt School will carry responsibilities well into this century. They will pursue career and personal paths in many occupations and settings, both at home and abroad. The challenge of undergraduate education is to give students an unparalleled academic experience and opportunities that suit their needs and aspirations.

NYU meets this challenge by providing students with a sound academic foundation and the professional skills necessary to achieve their goals.

At NYU Steinhardt we share the commitment to building the academic core experience, one that embodies high standards and an intellect common to the scientist, the artist, and the humanist. Each Steinhardt major is structured to cultivate specialized, professional knowledge and individual forms of expression, preparing students for professional life and ensuring that they can place their personal stamp on their chosen field of study through:

- Academic coursework in:
 - the liberal arts and sciences
 - specialty fields
- Field Placements
- Internships
- Study Abroad
- Research
- Community Service

Our aim is for our students to graduate with the wherewithal to adapt, grow, and thrive wherever they are, no matter what path they choose to follow in their professional and creative lives.

ADMISSIONS

Deadlines for the receipt of applications and all supporting credentials for **Summer or Fall Semester:**

Freshmen (Early Decision)	November 1
Freshmen (Regular Decision)	January 15
Transfers	April 1

Deadlines for the receipt of applications and all supporting credentials for **Spring Semester:**

Transfers	November 1
-----------	------------

FINANCIAL AID

Please submit your Free Application for Federal Student Aid (FASFA) as follows:

Fall or Summer Entry:

Freshmen	by February 15
Transfers	by March 1

Spring Semester (January) Entry:

Transfers	by November 1
-----------	---------------

NYU Steinhardt Quick Guide to Undergraduate Programs

APPLIED PSYCHOLOGY

The major in Applied Psychology is designed to provide students with a comprehensive knowledge of the theory and practice of psychology with an emphasis on the contexts that influence the behavior and development of children, adolescents, adults, parents, and families. Opportunities to apply the knowledge gained in lectures and readings are abundant through a required field experience in both research and real-world settings. Links between theory, research, and application are a recurrent theme throughout the program.

EDUCATIONAL THEATRE

In this drama-in-education teacher certification program, students discover the teaching power that flows from actively engaging with live theatre and classroom drama. The program offers a firm liberal arts foundation, covering history, literature, arts and social sciences, as well as a solid grounding in theatre skills, pedagogy and teaching methods. Additionally, on-campus productions and internships in the city provide students with hands-on experiences as actors, playwrights, directors, and producers of theatre for audiences of all ages.

MEDIA, CULTURE, AND COMMUNICATION

In this interdisciplinary program, students explore all aspects of communication — from film and television, to print media, to new media and the Internet — and the many ways in which various media interact with business, government, politics, civic affairs, non-profit organizations, and the everyday life of individuals. Focus in areas of study such as globalization and transcultural communication, images and screen studies, persuasion and politics, interaction and social processes, and technology and society. Participate in internships at top media and communications companies in New York City, student/faculty retreats, the communication club, and special lectures.

MUSIC AND MUSIC PROFESSIONS

- Music Business
- Music Composition (traditional, film scoring, music theatre, jazz, computer/electronic)
- Music Education
- Music Performance (classical, jazz)
- Music Technology
- Voice (music theatre, classical)

These music-based programs provide a foundation in the liberal arts and opportunities for interdisciplinary study that prepare students to be the best performers, composers, educators, technologists, and business professionals. Take advantage of a world renowned faculty, diverse performing opportunities, and our state-of-the-art computerized learning and recording studios. Experience New York City, the arts capital of the world, as you participate in exciting projects with composers, performers, film scorers, and theatre specialists, student teach in the city's diverse public schools, learn how to market CDs through our own label, Village Records, Inc., or intern with arts organizations and entertainment companies.

NUTRITION AND FOOD STUDIES

- Nutrition and Dietetics
- Food and Restaurant Management
- Food Studies

This unique program allows you to combine your enjoyment of food with an interest in health, culture, or business. Learn how such factors as geography, climate, marketing and trade practices, social trends, and family background and economic status affect food choices, production, and consumption. Gain a thorough understanding of human nutritional needs and how to help people maintain and improve their health by making appropriate food choices. The program's strengths are a strong foundation in the liberal arts and sciences; core lectures and lab courses that explore and integrate food studies, nutrition, and management; and extensive opportunities for elective courses and internships.

SPEECH-LANGUAGE PATHOLOGY

Our dynamic and rigorous undergraduate program in speech-language pathology is designed to integrate liberal arts and science coursework with a solid foundation in normal and disordered human communication processes across the lifespan. Students join a small, supportive academic community and observe ongoing therapy in our on-campus, state-of-the-art speech and hearing clinic. Speech-language pathologists work in such diverse environments as schools, hospitals, intensive care units, early intervention centers, rehabilitation centers, private practices, and corporate offices.

STUDIO ART

This intensive art-making Bachelor of Fine Arts program combines cutting-edge ideas with a wide range of technical approaches, ranging from oil painting to digital media and installation art. Participate in the student art club, exhibit your work in private and public venues, and make connections with leading contemporary artists who teach in the program. Work in artist studios, create public sculpture with a faculty member, or intern at alternative art galleries or major museums.

TEACHER EDUCATION

- Childhood Education/Childhood Special Education
- Early Childhood Education/Early Childhood Special Education
- Secondary Education: English, Foreign Languages, Mathematics, Science, Social Studies

Built on a liberal arts foundation and a common core of pedagogy courses, our teacher education programs engage you in fieldwork in schools, classrooms, and other educational settings from the very first semester. Coursework and student teaching ensures that graduates know their subjects and how to teach them, understand children and adolescents and how to help them learn, comprehend the complex realities of schooling, and are committed to equity, social justice, and excellence. Participate in extracurricular activities, including the Future Educators Club, where you can network with professional educators.
