

Work Safely with Portable Power Tools

Editor's note: Our Tailgate Training Tip Sheets are [available in Spanish at www.gemplers.com](http://www.gemplers.com).

KEY POINTS:

- Carefully inspect power tools, cords and accessories before each use.
- Always wear personal protective equipment, including shielded [safety glasses or goggles](#).
- Be sure your power tools are double insulated or grounded.

Note to trainer: Follow this script or use it to help guide you through a 10- to 15-minute tailgate training session for your ag/hort workers. You may photocopy this sheet for your employees' personal use. However, it may not be published or sold.

Bring to the training session samples of the eye protection, hearing protection and any other personal protective equipment your employees should wear when working with power tools.

Power tools can be dangerous

- Hand-held power tools are lightweight, portable and convenient to use. Because of that, it's easy to forget that they're dangerous.
- Unsafe use of power tools can result in:
 - electrical shock
 - fires or explosions
 - severe cuts, puncture wounds, or injuries from flying debris
- It's important to understand how your tool works and how to prevent accidents.

Before you start work with a tool

- Sanders, drills, saws, grinders and other power tools come with written instructions. Look those over before you plug in the tool. See your supervisor if you have any questions.
- Be sure your work area is clean. Oily rags, sawdust, papers and other clutter can easily be ignited by sparks or heat.
- Don't use power tools if your work area is wet or damp or if you are outside in the rain. Operating a power tool with wet hands or while standing in water can result in electrical shock.
- Make sure the tool is turned off and unplugged from the power supply before you inspect it or install bits or blades.
- Carefully inspect the tool, its cord and any accessories before each use. Look for dirt, rust, dull blades, loose parts, malfunctioning switches, defective insulation or any other damage. Don't use the tool if it needs repair. Report any problems to your supervisor.

Unplug power tools before changing bits or blades.

Work Safely with Portable Power Tools

Wear the right protective equipment

- Always wear [long pants](#) and a [long-sleeved shirt](#) when working with power tools. Don't wear loose clothing.
- Tie back long hair, and remove any jewelry.
- Wear sturdy [shoes](#) with nonskid soles.
- Protect your hands, eyes, face and lungs. Wear:
 - [sturdy gloves](#)
 - [shielded safety glasses or goggles](#)
 - [a dust/mist respirator](#)
- A [face shield](#) may be recommended where there is a risk of flying particles.
- [Earplugs or earmuffs](#) will also help protect you from loud noise.
- Different tools may have different requirements, so be sure to check the manual. Ask your supervisor if you are uncertain which protective equipment to wear.
- This is some of the protective equipment we use here.

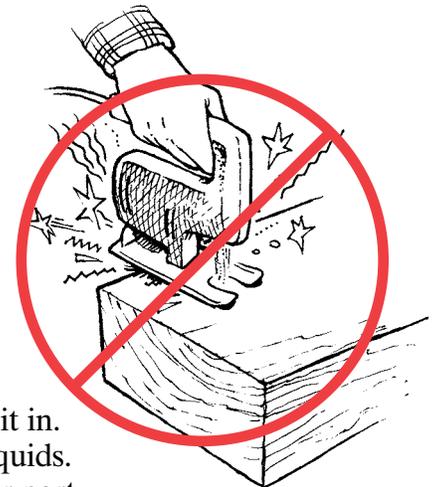

Note to trainer: Show trainees the protective equipment you provide for working with power tools.

Some important safety tips

1. Be sure your power tools are double insulated or grounded. Plug a three-pronged, grounding type of plug into a three-pronged outlet.
2. If you must use an [extension cord](#), use a heavy-duty cord. Use a weatherproof extension cord outside.

Note to trainer: It's a good idea to have ground fault circuit interrupters (GFCIs) for power tool use. These are widely available at hardware stores.
3. Use the proper tool for the job. Never force a small tool to do a job that requires a heavy-duty tool.
4. Keep guards and other safety devices in place.
5. Remove adjusting keys and wrenches from the tool before plugging it in.
6. Don't use power tools in areas with chemicals or other flammable liquids.
7. Turn off your tool and unplug it before changing a bit, blade or other part. And unplug it when you finish the job.

Don't use a small tool for a big job.

Are there any questions?

Note to trainer: Take time to answer trainees' questions. Then review the Power Tool Safety Do's and Don'ts.

POWER TOOL SAFETY DO'S AND DON'TS

DO:

- Follow all written instructions and warnings.
- Immediately turn off and unplug any tool that sparks, overheats or causes an electrical shock.
- Keep power tools clean, sharp and in good operating condition.

DON'T:

- Use a power tool without wearing appropriate personal protective equipment.
- Overreach or use a power tool while standing on a ladder. Plant your feet firmly on the floor.
- Try to fix a defective power tool yourself.
